## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) The invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 8-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Wong et al. (U.S. patent # 6,775,164).

Art Unit: 2838

Wong et al. disclose the claimed invention An encapsulated power converter (figure 1-3 and column 3, line 20-24), a rectifier (figure 1, item 104), a MOSFET (figure 1, item 20), a capacitor (figure 1, item 116), a voltage level detection (figure 1, item 64), a resistive charging path (figure 1, item 47), a housekeeping supply (figure 1, item AC1 and AC2), isolated low voltage ON/OFF (figure 1, item 50), a photo detector (figure 1, item 64), a peak detector (column 4, line 35-55), a comparison circuit (figure 1, item 30), an independent pin for comparison circuit (figure 1, item 46) and at least one circuit board (figure 1, item 10).

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 and 14-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Squibb (U.S. Patent # 5,499,184) in combination with Keith (U.S. patent # 5,395,264).

Squibb discloses claimed invention an electronic power converter (figure 1-2), including at least high voltage electronic circuitry (figure 2), an inrush current limiting circuit (figure

2, item 58), a MOSFET switch (figure 2, item 32), a bridge rectifier (figure 2, item 24), a capacitor (figure 2, item 56), voltage detection circuit (figure 2, item 38), a resistive charging path (figure 2, item 58), an opt-coupler (figure 2, item 40), a secondary side isolated low voltage ON/OFF switch (figure 2, item 50 and column 5, line 50-55), a low voltage sense (column 5, line 40-50) and resistive connection to a housekeeping supply (figure 2, item 20). Squibb does not disclose the utilization of the technique for a detachable line cord. Keith teaches the utilization of the similar technique for a detachable line cord. It would have been obvious one having an ordinary skill in the art at the time the invention was made modify Squibb's power supply by utilizing the technique taught by Keith for the purpose of providing power supply that can be used with standard power supply.
